Ideation Phase — Define the Problem Statements

Date	14 October 2026	Maximum Marks
Project Name	Metro Ticket Generating System in ServiceNow	2 Marks

Customer Problem Statement Template:

Create a problem statement from the commuter's point of view. The objective is to capture the user, desired outcome, barriers and root cause before defining the solution.

I am	a metro commuter who wants a quick and reliable way to buy a ticket before travelling.
I'm trying to	select my route, journey type and passenger count and obtain the correct fare.
but	manual ticket queues and manual fare calculation can be slow, inconvenient and error-prone.
because	traditional ticketing depends on physical counters and does not provide a consistent digital self-service flow.
which makes me	spend extra time waiting and makes it harder to access a digital ticket immediately.

Problem Statements

ID	User	I'm trying to	But	Because	Impact
PS-1	Metro commuter	Buy a correct ticket quickly	Queues and manual steps	Ticketing is not fully digitized	Extra waiting time
PS-2	Metro commuter	Know the fare before checkout	Fare calculation may be manual	Route rules are not automated	Uncertainty / errors
