Project Design Phase — Problem – Solution Fit Template

Date	14 October 2026	Maximum Marks
Project Name	Metro Ticket Generating System in ServiceNow	2 Marks

Problem – Solution Fit Template:

The solution fits the commuter problem because it converts a multi-step, manual ticketing activity into a guided digital workflow on a platform already used for service delivery.

Purpose

- Solve a frequent commuter inconvenience through a simple digital flow.
- Reduce manual fare calculation and ticket preparation.
- Improve adoption by providing QR output on the same platform.
- Create a reusable foundation for future metro services.

Template — Problem / Behaviour / Solution Fit

Problem	Current behaviour	Solution trigger	Expected outcome
Ticket queues	Wait at counter / manual purchase	Open catalog item	Self-service ticket
Fare uncertainty	Ask or calculate fare	Select route + journey	Automatic fare
Paper dependency	Carry physical ticket	Generate QR	Digital ticket
Passenger scaling	Manual multiplication	Set passenger count	Correct total

Fit Assessment

Strong fit: the proposed workflow directly addresses the core user pain points without requiring a separate application for the MVP.
