Project Design Phase — Solution Architecture

Date	14 October 2026	Maximum Marks
Project Name	Metro Ticket Generating System in ServiceNow	4 Marks

Solution Architecture:

The architecture bridges the commuter requirement and the ServiceNow implementation by separating user input, station master data, fare calculation, checkout and ticket output.

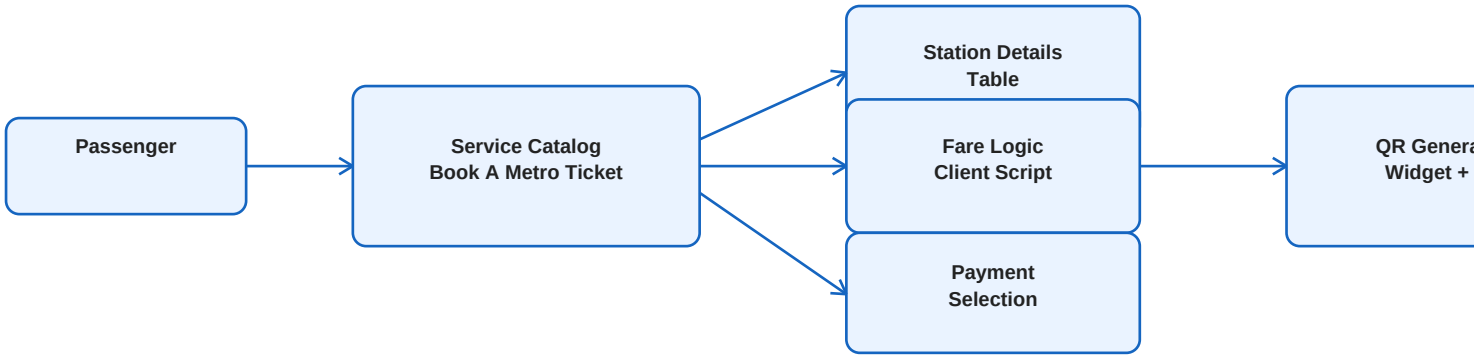

Figure 1: Architecture and data flow of the Metro Ticket Generating System

Architecture Layers

Layer	Responsibility
Experience	Service Portal / catalog form used by commuter.
Configuration	Catalog variables and journey choices.
Business Logic	Fare calculation and submission scripts.
Data	Metro Station's Details custom table and request data.
Output	QR widget and digital ticket representation.
