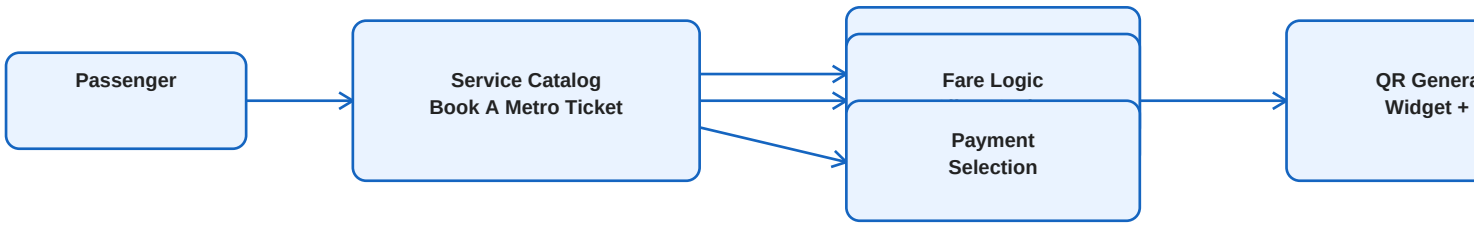
Project Design Phase-II — Technology Stack (Architecture & Stack)

Date	14 October 2026	Maximum Marks
Project Name	Metro Ticket Generating System in ServiceNow	4 Marks

Technical Architecture:

The deliverable uses ServiceNow platform capabilities to implement the commuter-facing catalog, station data, client-side fare logic and QR output.



Reference architecture adapted for the Metro Ticket Generating System.

Project Design Phase-II — Technology Stack (Architecture & Stack)

Date	14 October 2026	Maximum Marks
Project Name	Metro Ticket Generating System in ServiceNow	4 Marks

Technology Stack

Technology / Component	Use in Project
ServiceNow Service Catalog	Catalog item and commuter booking form.
Service Portal	User-facing digital ticket booking experience.
Catalog Variables	Source, destination, journey type, passenger count, fare and payment inputs.
JavaScript / Catalog Client Script	Route fare calculation and checkout/QR behavior.
Custom ServiceNow Table	Metro Station’s Details stores station master records.
QR Code API	Creates QR image from the generated ticket URL.
ServiceNow Database	Stores station and request-related records.
Reporting / Analytics	Future reporting on transactions, routes and passenger demand.

Implementation Notes

The current PDI implementation is an MVP. For production, payment processing, QR validation, authentication, access controls and fare master data should be integrated using approved enterprise services.
